DATE1 - 9/12/21

Asa Dillahunty
● What's been done: Basic UI built in React Native with pagination
● What will be done: More in-depth post imitation, integration with map and database logic
● What's been hard: Design, documentation and getting code to run on other machines

Dylan Marcum-Pollard
● What's been done: Expo links to device's map app (Google Maps or Apple Maps), displaying user's current location, markers can be placed but location is hard coded and can't figure out how to place new markers
● What will be done: Figure out how to add additional markers, updating markers in semi-real time
● What's been hard: Placing new markers in real time at the user's location

Lillian Presley
● What's been done: Created a draft of the website
● What will be done:  Updating with links to all the files and adding a logo
● What's been hard: Figuring out how to get the subpages to format with the theme, figuring out a good navigation menu in markdown

Sav Campbell
● What's been done: Researched Firebase Development (watched through the playlist on YouTube and read through documentation); downloaded necessary software; wrote up a basic outline of the database
● What will be done: Add the code for the database to the app
● What's been hard: Learning how to run the code that's already been written
